DETAILED ACTION

Claims included in the prosecution are 1-8.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Slater et al (US 6,355,268) in view of Crowe et al (US 4,857, 319) and Cherian (US 6,548,071) (all are of record). .

Slater et al teach liposomal compositions containing Topotecan. The liposomes contain sucrose and cholesterol. The amount incorporated is 99.9 % and the diameters of liposomes are 94. 5 nm (abstract, Examples and claims). What is lacking in SLATER et al is the lyophilization of the liposomes to form a powder, which forms liposomes again with subsequent addition of an aqueous medium.

Crowe et al teach that the liposomes can be preserved by freeze-drying in the presence of a sugar such as sucrose (0.1:1 to 4:1, sucrose-lipid). According to Crowe et al, when the lyophilizates are reconstituted by rehydration, the resultant liposomes retain up to 100 % of the originally encapsulated contents (abstract and Example 7).

Cherian teaches that the stability of camptothecin derivatives is enhanced when

lyophilized together with phospholipids. The powder upon rehydration forms colloidal dispersion, which exhibits anti-tumor activity (col. 3, line 5 through col. 7, line 12 and claims).

To lyophilize the liposomal compositions containing the camptothecin derivative, Topotecan taught by Slater et al would have been obvious to one of ordinary skill in the art since Crowe et al teaches that when liposomes are lyophilized together with cryoprotectants such as sucrose retain up to 100 % of the originally encapsulated contents and since Cherian teaches enhancement of stability of camptothecin derivatives when lyophilized together with phospholipids.
